Subject: Misc, not pressing: What your hundred dollars got you. . .

At bottom is a link to a super-brief piece re: western water availability and climate. Just to give you a long-term, big-picture intuitive feel for, say, Rosemont dewatering issues (i.e., the mine's within the Colorado River watershed; near a major city, etc.).

Increasing aridity, though, is way more intense for southern Cal, Ariz, New Mex, south Texas than north of there out West, in my book. With the exception of shrinking snowpack, since there's more/used to be more snow in the north.

Also, for High Country News, this is not a stylish piece. They're normally about. . . storytelling. http://www.hcn.org/articles/climate-change-is-shrinking-the-wests-water-supply?utm_source=wcen1&utm_medium=email
